

Notes for the workshop

“Urban Land Cover Classification with the EnMAP-Box QGIS Plugin”

Maria Antonia Brovelli, Quang Huy NGUYEN, Matej Zgela

To ensure an efficient workshop, we recommend that participants prepare in advance

1. Laptop with OS Window and Linux (Mac OSX could face certain difficulties in installing Python dependencies which might require using Virtual Machine).
2. Python 3.12 – Python version compatible with QGIS 3.44.
3. QGIS 3.44 “Solothurn” LTR (Long Term Release) version (EnMAP-Box 3.17.8 works on QGIS version from 3.40 to 3.99, however LTR version is recommended for stable experience). QGIS on Window should be installed via OSGeo4W in order to manage better Python dependencies.
 - Installation guide for Windows can be found here:
<https://qgis.org/resources/installation-guide/#windows>
 - Installation guide for Linux can be found here:
<https://qgis.org/resources/installation-guide/#linux>
4. EnMAP-Box 3.17.8 (most recent version of EnMAP-Box 3) with required Python dependencies. Installation guide can be found here for all OSs:
https://enmap-box.readthedocs.io/en/latest/usr_section/usr_installation.html
